

Task Card 1 · Build an App

1 h 45 min hands-on · Claude Code · **No build steps — the demo is a double-click** · For coders and curious non-coders

How to think (the actual lesson)

The app is the excuse. Three habits are what you take home — they transfer to all agentic work:

1. **Write a short spec first.** 3–5 sentences forcing clarity: what, for whom, minimum working scope. Use **SPEC-TEMPLATE.md**.
2. **Get the happy path working before anything else.** One flow that works end-to-end beats five half-built features. Resist polishing early.
3. **Iterate in small steps.** "Build X" and then "now add Y to the existing flow" — the second is how you actually steer a coding agent.

The tech rule (important — it's why the demo works)

The app must be **one single index.html file** with plain JavaScript and CSS. No build steps, no npm, no server. Data lives in the browser's localStorage.

How you demo it: double-click the file → it opens in the browser. That's the whole demo. A ready-made prompt that gives Claude these rules is in **PROMPT-TEMPLATE.md** — start there.

Pick an app (don't invent your own — that eats 30 minutes)

Core thinking — spec → build → iterate:

- **Field Checklist** — inspection rounds (e.g. playgrounds): items with OK/deviation, photo, summary.
- **Case Registry Light** — register a case, set status, search.
- **Booking View** — book a slot with a caseworker, simple calendar.

Quick visual payoff — for the skeptics:

- **Meeting Meter** — live meeting cost in kronor from participant count.
- **Pomodoro with stats** — small, satisfying, room to iterate.
- **Sokigo product quiz** — you write the questions.

Suggested timeline

TIME	STEP
0:00–0:15	Fill in SPEC-TEMPLATE.md. Pick an app from the list.
0:15–1:00	Build the happy path using PROMPT-TEMPLATE.md. One working flow, nothing else.
1:00–1:30	Iterate: add one nice-to-have, fix one thing. Practice incremental prompting.
1:30–1:45	Lightning demo: double-click index.html and show it.

DONE WHEN
index.html opens on double-click and does what your spec promised. Bonus: you asked Claude for at least one change and felt what iteration is like.

IF YOU GET STUCK
Come to the AI table. Most common: Claude Code login (5 min to fix) or an oversized spec (cut — the MVP line in the template is law). If Claude suggests npm, a server or a framework: point it back to the tech rules.
