

AI Workshop — Overview

1 h 45 min hands-on session · Sokigo AI Kickoff · Four task cards, free choice, one AI table

The format

Pick one (or more) task cards. Work alone, in pairs, or come hang out at the **AI table** to chat, ask questions, or work alongside the AI team. Every card is self-contained: the folder holds the card plus all templates and material needed.

#	TASK	WHO IT'S FOR	TOOLS
1	Build an App — one HTML file, no build steps, demo = double-click	Coders + curious non-coders	Claude Code
2	PRD to Clickable Prototype — mobile inspection flow from a real PRD	UX designers	Claude Design / Desktop
3	Build a Writing-Style Skill — package your writing rules, prove the difference	Technical writers	Claude Desktop
4	Build a Team of AI Agents — orchestrator + specialists with model & effort choices	Experienced coders	Claude Code

Ground rules

- **Done beats perfect.** Every card has a clear "Done when" criterion. Aim for that, not more.
- **Stuck?** Come to the AI table. Installation issues, weird errors, "what do I even type?" — all valid questions.
- **Last 10 minutes:** optional lightning demos, max 1 minute each, straight from your own screen.

Shared timeline

TIME	ACTIVITY
0:00–0:10	Intro: the cards are presented, everyone picks one.
0:10–1:30	Work. Facilitators circulate and staff the AI table.
1:30–1:45	Lightning demos + reflection.

Facilitator notes (the AI table)

- Most common bottleneck in the first 15 minutes: Claude Code installation/login. Dedicate one person to it.
- Verify the venue network in advance; mobile hotspot as backup.
- Tasks 1 and 4 require Claude Code. Tasks 2 and 3 run on Claude Desktop / claude.ai alone.
- Distribute the folders (shared repo or download link) before the session — nobody should retype a template.
- Finished early? Switch cards — they are independent.
